

BATCHING SYSTEMS

www.dgs-ps.com

The DGS batching systems typically distribute products per hopper over several conveyor belts. Once the desired weight is reached, the system automatically lowers the products into the selected packaging type.

Our system handles cartons as well as crates and can be further customized to include the option of packaging with plastic bags. The packaging process provides flexibility, allowing for both soldier packing and layer packing techniques. Additionally, the DGS batching system supports bulk packaging, with weight options ranging from 5 to 20 kg.

- Modular systems
- Catch weight and fixed weight
- Bulk packaging in various weights
- Compatible with both boxes and crates

Additional solutions: lid placing & storage

After loading the boxes, sealing them is the next step. Lid placement can be done either manually or automatically. The automated solution of DGS also includes unfolding the boxes, without the need for operators. After lid placement, the subsequent processes, including strapping, labeling, and wrapping, can be fully automated.

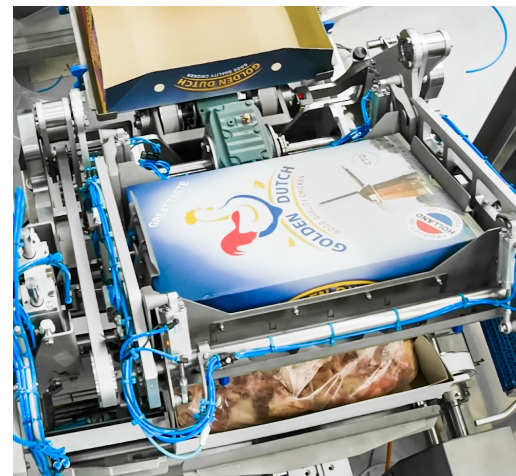

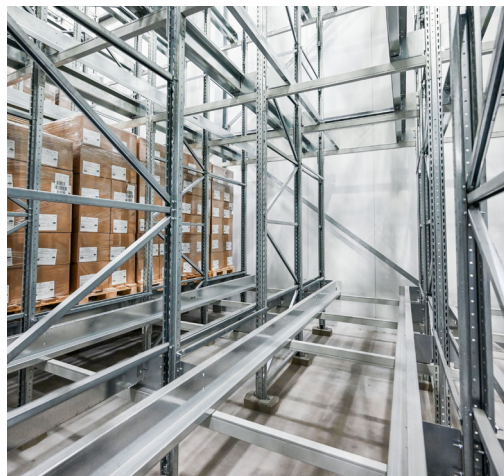

Concerned about the storage of your products, particularly in refrigerated conditions? No problem. With our wide range of storage systems designed for boxes, crates, and refrigerated storage, we offer customer-specific solutions. At DGS, we take care of your entire internal logistics, eliminating the need to engage with multiple parties and ensuring direct communication.

About DGS

DGS is a Dutch company focused on developing innovative solutions for the food industry. We consider ourselves as a project-centric organization, not just a machine manufacturer. To increase efficiency and quality we aim for the highest possible level of automation. We engineer and manufacture the machinery and systems in-house, carry out the installations ourselves and have our own service and after-sales department.
